1 First-Time Launch & Master Account Setup

When you open PROBAHO CRM for the very first time, the system will prompt you to initialize your **Master Administrator Account**. This account has master ownership over your business data, financial profits, and employee management.

1. **Username:** Enter an administrator username (default is `admin`).
2. **Full Name:** Enter the business owner or general manager's name.
3. **Showroom / Business Name:** Enter your brand or store name (e.g., *Urban Threads*).
4. **Master Password:** Create a strong password and confirm it.
5. Click **"Initialize Master Setup"** to launch into the dashboard.

Important Security Tip: Keep your Master Password in a safe place. You will need it to view confidential profit margins, change financial settings, and manage staff accounts.

2 Adding Employees & Setting Permissions

PROBAHO lets you add sales associates, warehouse staff, and delivery managers while ensuring they only access the features they need.

1. From the left sidebar menu, click **Settings & Backup** (or click your profile icon in the top bar).
2. Click on the **Staff Management** tab.
3. Click the **"+ Add Staff Member"** button.
4. Fill in the employee details:
 - **Full Name & Role:** (e.g., *Rahim Ahmed — Sales Associate*).
 - **Login ID & Password / PIN:** Assign an easy-to-remember login ID and initial password (e.g., `1234`).
 - **Permissions Checklist:** Choose exactly what they can see:
 - **Orders & POS:** Allows punching in customer sales.
 - **Invoices:** Allows viewing and printing receipt slips.
 - **Customers:** Allows accessing customer addresses and phone numbers.*(Leave "Payments" and "Settings" unchecked so employees cannot see supplier costs or owner profits.)*
5. Click **"Save Staff Member"**.
6. **Share Access:** Click the **WhatsApp / Share** icon next to their name to instantly copy a formatted message containing their login ID and instructions!

3 Feature Tour — What Each Module Does

Here is a breakdown of every module inside PROBAHO CRM and how to use it day-to-day:

1. Executive Command Center

Your real-time business overview. Shows today's gross sales, estimated net profit, active orders in delivery, and courier COD cash currently due. Also graphs daily sales trends and sales channel breakdown (Messenger, WhatsApp, Store).

2. Orders Management & POS

Punch sales & print receipts. Click *+ New Order* to create a sale, select items, and pick payment methods. Print thermal delivery challans or standard invoices with barcodes with one click.

3. Inventory & Variant Catalog

Stock & multi-variant tracking. Add items with size variations (S, M, L, XL), fits, and colors. The system automatically calculates cost valuation, profit margins, and flags low stock in red.

4. Customer CRM & RTO Loss Shield

Smart customer directory. Segments clients into tiers (Champions, VIP, Regular). Features an *Automated Return Risk Warning* that flags habitual order rejectors before you ship.

5. Payments & Financial Ledger

Complete cash flow tracking. Logs inflows across Cash, bKash Merchant, Nagad, and Bank. Reconciles bulk courier payouts (Pathao, Steadfast) and records vendor costs and overhead expenses.

6. Couriers & Delivery Partners

Pre-configured logistics. Integrated presets for Pathao, Steadfast, RedX, Paperfly, Sundarban, and eCourier across all 64 districts in Bangladesh with standard Dhaka / Outside Dhaka rates.

4 How to Connect Google Firebase (Online Sync)

By default, PROBAHO runs **100% offline** on your local computer for lightning-fast speed. If you want to sync multiple computers or access data online, connect your free Google Firebase account:

1. Go to the free **Firebase Console** (console.firebase.google.com) and click **"Add Project"**.
2. Click **Firestore Database** → **Create Database** (choose *Start in test mode*).
3. Click the **Project Settings** (gear icon ) → Scroll to **"Your apps"** → Click the **Web icon** ().
4. Copy the web configuration snippet:

```
const firebaseConfig = { apiKey: "AIzaSy...", authDomain: "my-showroom.firebaseio.com", projectId: "my-showroom", storageBucket: "...", messagingSenderId: "...", appId: "..." };
```

5. In PROBAHO CRM, open **Settings & Backup** → **Cloud Sync** tab.
6. Enter a **Company Workspace Code** (e.g. `URBAN-101`), paste the code block into the box, and click **"Test & Save Cloud Sync"**.

You are now synced! Any computer using the same Workspace Code and configuration will automatically stay in sync in real time. If your internet ever cuts out, PROBAHO continues running offline seamlessly without losing any data.

5 Backups & Complete Privacy

- **1-Click Local Backup:** Under *Settings & Backup*, click "**Export Database Backup**" at any time to save an instant snapshot of your entire business database to your hard drive or a USB stick.
 - **100% Private:** Your customer phone numbers, orders, and profit numbers are never sent to any third-party servers. All data belongs strictly to you.
